

Full Scale Sensus Implementation

The following are reasons I believe full scale implementation of the Sensus metering solution this coming fiscal year would benefit the District,

- Reduce Water Loss rate
- Potentially increase revenue with greater metered accuracy
- Reduce staff time replacing meters
- Eliminate staff time reading meters
- Reduce office staff time processing meter change-outs
- Eliminate field data logs
- Full scale customer portal access to all customers
- SB 1668 full scale implementation of 55 gallons per capita in 2023, District would be ahead of the curve
- Utilizing reading towers to capacity
- Eliminating field staff time spent on low/no flows, meter accuracy issues, and certain investigations would be able to be done from the office
- Potential increase in material and labor installation costs as inflation continues to increase at record rates, things are typically cheaper now rather than later
- No manufacturing defects or potential problems have surfaced with the 2300+ meters already deployed
