

HAVE LIVESTOCK?

HOW TO DISPOSE OF COMMON LIVESTOCK RELATED WASTE

WHERE DOES IT GO?

SHARPS - Syringes, and other medical waste with needles, go into an impermeable container (sharps container, a coffee can or plastic laundry jug) and are disposed of at HHW facilities (see reverse). Sharps are dangerous when placed in the trash. Trash is handled by people at some point during processing. By properly disposing of sharps, you lessen the risk of injury to others.

MANURE - Compost manure from horses, cows, sheep, pigs, goats, rabbits, and chickens, or put in the green organics container. Do not put manure in the trash container. Dog and cat waste goes in the black trash container.

MEDICATION - Contact County HHW for a medication waste disposal kit. Do not put medication in the trash (see reverse).

DEAD LIVESTOCK - Call a rendering service in order to put it to beneficial use (see reverse). Under 50lbs can go in the black trash container (small quantities only).

ANIMAL BEDDING (STRAW & SHAVINGS) - Compost it or put it in the green organics container.

FEED PACKAGING - Paper bags go in the green organics container, plastic bags or plastic-coated paper bags go in the black trash container, and plastic buckets go in the blue recycling container. Twine from straw or hay goes in the black trash container.
